In essence, DNS is simply a
database that links
meaningful names (known as
host names), such as
http://www.microsoft.com, to
a specific IP address, such
as 192.168.124.1. Simply
linking addresses to names
is just the beginning,
though, because DNS has many

more features in addition to host-name-to-address mapping.

DNS: What It Is and What It Does - dummies

queries through: Recursive DNS Servers (or Caching Servers, sounds like "caching") and Authoritative Servers (what DNS Made Easy provides). In a nutshell, Authoritative DNS servers store the "maps" of your domain names to IP addresses. This domain name to IP mapping is usually configured by system administrators.
